Oreka TR supports Cisco CallManager 5

Chicago - OrecX, a leading provider of VoIP voice recording announced today that their Oreka TR solution for voice recording supports the new Cisco CallManager 5 and is in production at Telesphere Networks.

Oreka TR supports SIP along with Cisco CallManager 3.X and 4.X. Over 12,000 users have downloaded Oreka.

The pricing model encourages free pilots to test the software and low initial and ongoing investment by billing monthly for annual subscription services.

"We believe customers deserve an inexpensive way to record phone extensions, for whatever reason they desire. Our web based retrieval interface can tag extensions, or work groups and allow clients to listen immediately to results from any multi-criteria search." states Bruce Kaskey, of OrecX.

"We plan to bridge the price/performance gap by providing customers an easy way to record, retain and recall voice recordings. In the end, the customer is the winner."

Oreka TR can be viewed and downloaded from its website www.orecx.com .

About OrecX

OrecX is the primary developer and sponsor of the open source call recording initiative managed by Oreka at the oreka.org website and through the project posted on sourceforge.net.
