

PRESS RELEASE

September 9th, 2008

Tokyo, Japan – OPTSP and OrecX announce Partnership in Japan

OPTSP CO.LTD, A Tokyo corporation with its principal place of business at Miyamura_Bldg.2F 1-6-1_Shimoochiai, Shinjuku-ku Tokyo, 161-0033. Yutaka Yamada CEO has made an exclusive distributor contract with OrecX LLC, Chicago, Illinois to support and distribute Oreka TR in Japan.

“We looked for a product to fit our business in Japan and evaluated many products.” states Shinji Uchi, of OPTSP. “We came to the conclusion that Orecx's product has the best utility and quality we were looking for.”

“VoIP technology is advancing rapidly and businesses need a technology partner that can not only deliver next generation solutions, but help them understand how to optimize all the features and functionality within this technology to grow their business and shorten their ROI,” says Bruce Kaskey co-founder of OrecX. “OPTSP is a proven leader in this field and is recognized in Japan as the premier technology partner.”

Oreka TR and Oreka QM are scalable from 5 to 50,000 users across single and multiple sites and there are no limits on the number of recording services reporting to the central database server. Recordings can be indexed using a variety of fields such as time, employee, date, and group allowing for immediate record retention, search, and retrieval.

OrecX's fine grained privilege access system helps ensure data security by restricting employee access to data that is necessary to perform their daily tasks. User names can be attached to any number of security profiles that define the level of access for specific business objectives performed by each registered user. More complex organizational structures can be mapped using OrecX TR's hierarchical group system.

"Businesses are embracing Oreka TR and Oreka QM because they enhance their operations, are easy to use, easy to install, and easy on the budget," says Kaskey. "We need partners like OPTSP to help us grow locally in Japan."

Founded in 1990 Optsp is a proven leader in telephony solutions and is recognized in Japan as the premier developer of products based on open source platforms.

OrecX (www.orecX.com.br) OrecX is the primary developer and sponsor of the open source call recording initiative managed by Oreka at the oreka.org website and through the project posted on sourceforge.net.
